

# ADVANCING SECURITY AUTOMATION NEAR-ZERO LATENCY

## The *ProAct*<sup>™</sup> Server

*We Know Your World*<sup>™</sup>

At any given moment there are over 10 million recognized IP threats. Your security team painstakingly weeds through an overwhelming abundance of "actionable threat intelligence" to determine the true risk, then manually manages firewall rules and policies based on the top priorities of today. ProACT<sup>™</sup> solves this challenge by rapidly aggregating multiple threat feeds and intelligently determining risk-levels. In near real-time, this data directly feeds to a PoliWall<sup>™</sup>, which takes immediate action to block threats bi-directionally based on your own defined level of acceptable risk!

## CONTACT US TODAY!

Learn how ProAct<sup>™</sup> risk-scoring engine gives real-time threat precision—with action.

### Speed and Precision

ProACT is an auto-adjusting IP risk-scoring and threat aggregation engine that processes tens of millions of threats at line speeds with no network slowdown. ProACT's risk-scored threat information automatically feeds into PoliWall where, with near-zero latency, real-time action stops cyber threats and data leakage.

### Multi-Feed Aggregation

ProACT<sup>™</sup> aggregates IP threat intelligence data from multiple 3rd-party sources and intelligently assigns IP risk scores based on the compiled data and IP reputation analytics in real-time through a fully automated process.

### Intra-Network Threat Feed

Internal threat information from firewalls, IDS, and SIEM is aggregated with external threat feeds for threat identification precision. ProACT<sup>™</sup> then feeds the threat data in near real-time to the PoliWall<sup>™</sup>, which automatically blocks malicious connections at your network perimeter.

### Intelligent IP Risk Scoring

ProACT<sup>™</sup> automatically assesses risk in real time based on the changing regional and organizational threat posture associated with your enterprise network activity. Real-time assessment alleviates risk of blocking or allowing outdated or re-assigned IP addresses.

### Easy Integration

ProACT integrates with existing information systems via a robust REST API, augmenting existing systems and significantly reducing security management time.
