

poliWall®

— IP and domain blocking service reduces the attack surface up to 90% ahead of the firewall with virtually no network latency.
Frictionless, scalable security—
to meet and defeat
the growing threat landscape.

There are over 10M known IP threats. Firewalls only filter up to 300K. PoliWall® bridges that disturbing gap, filtering over 100M threats.

Take back control of your network.

Cyber threats are increasing and enterprise defenses are not scaling at an equivalent pace. Ransomware, Malware, Cybercrime, State-Sponsored Attacks. Threats are overwhelming traditional firewalls and security defense strategies are obsolete as soon as they are implemented. Companies need tools that are automated, and rapidly scale as threats scale.

PoliWall® answers the call to action by automating GEO-IP, threat intelligence and blacklists/whitelists with the capacity to filter over 100M threats, scaling well beyond anything available on the market today!

AIG CyberEdge Policyholders receive PoliWall IP blocking service with a bound policy.

- Automated threat intelligence feeds from industry leading security companies & government programs
- Block countries with a click on a map, exceptions to a single IP
- Minutes to Install--Quick Time to Value
- Dashboard reporting includes: threats blocked, activity levels, top IPs and ASNs, top countries, and top threat intel categories.
- Intuitive graphical interfaces have click-easy controls, pre-set or user-determined risk levels, and real-time and historical traffic statistics
